(a) Up to and including 1958 average rainfall for each year (represented by 100) is the average over the period 1911–1942. As from 1st January, 1959 a long period average from a selection of representative stations is used.

SEASONAL CONDITIONS, TASMANIA: FEBRUARY, 1965

Rainfall: Conditions generally during February were the driest for over 50 years, negative departures from normal ranging from 60 per cent on the West Coast to 94 per cent in the North and on the East Coast. Falls in the pastoral areas of the North-west and the Central Plateau catchment areas were notably deficient, while in the South-east and Derwent areas falls were 65 per cent to 77 per cent below normal.

Heaviest fall of 420 points was at Lake Margaret while at Bridport, Upper Scamander and Mathinna, no rain was registered during the month.

Temperature: Day temperatures were mainly above normal, maximum departures ranging from 1° below normal, in a narrow coastal fringe in the southern half of the State, to more than 3° above normal in inland areas. Overnight temperatures were up to more than 3° below normal except for a large section from the lower Midlands to the Central Plateau and small areas near Eddystone Point and Erriba, where readings were slightly above normal.

Highest temperature for the month (93°) was recorded on the 21st February at New Norfolk and the lowest (27°) at Mt. Barrow and Mt. Wellington on the 11th February.

Rural conditions: The lack of significant rainfall and the generally high temperatures during the month, caused pastures to dry out considerably and rain was needed in most grazing areas, although the lower Midlands reported an abundance of feed following heavy rain in December and January. Severe frosts caused some damage to canning pea crops in the North-west and North-east.
